

A CV tells your past. Njia helps choose your next step.

AI career guidance grounded in your CV
and the skills your target market asks for.

THE LEARNER'S THREE QUESTIONS

01 What can I already show?

Find strengths backed by actual CV excerpts.

02 What should I work on first?

Prioritize skills using Kenya + target-role data.

03 What can I do this week?

Leave with clearer CV bullets and concrete practice.

W

ILLUSTRATIVE PERSONA

Wanjiru
Nairobi · aspiring data
analyst

Has project experience.
Needs a credible CV and
a focused learning plan.

From a vague bullet to a useful next move.

One assessment: evidence-grounded strengths, demand priorities, suggested rewrites and interview practice.

CV rewrites checked for numbers/tools, still require human factual review. Example below is illustrative.

BEFORE / SUPPLIED CV FACTS

“Cleaned sales data in Excel and made weekly charts.”

AFTER / HUMAN-REVIEWED EXAMPLE

“Prepared weekly sales charts in Excel using cleaned sales data.”

01 / Strength

Excel data preparation, supported by the learner's own CV excerpt.

02 / Priority

If SQL is not evidenced, start with a JOIN and a checked summary.

03 / Action

A seven-day plan plus a tailored interview question and rubric.

Better priorities start with local context.

Historical skill mentions inform the advice; the language model does not invent demand figures.
